

Equine Product Feeding Guideline

Premium Blends

Creating a Forage First® Program for your horse is easy . . .

1. Nutrient needs are determined by life stage of horse and class of horse/level of activity.
2. As much of the horse's nutrient needs as possible should be provided by forages (pasture, hay and/or forage products like hay cubes or forage pellets).
3. Provide vitamin-mineral products because forages do not contain all the minerals and vitamins needed by a horse. These can be provided by one of the below Premium Blend products or with GROSTRONG® Vitamin-Mineral products.
4. Good-quality forages and a vitamin-mineral supplement may provide all the nutrients and calories a non-working, mature horse needs. For all other classes and activities, additional nutrient needs can be met with one of the Premium Blends and/or Premium Hi-Fat Supplements (HEALTHY GLO® or MOORGLO®).
5. StaySTRONG™ Metabolic Mineral Pellets and StaySTRONG 33 Ration Balancer also provide excellent ways to balance a forage diet by providing vitamins, minerals and essential amino acids/protein sources along with other beneficial nutrients in a 1-2 lb daily feeding rate.

Class of Horse: Life Stage or Activity Level	Premium Blends Product Recommendations (choose one)
	Recommend amount fed to be split into two or more feedings daily
Growing Foals (up to 3 years of age)	JUNIORGLO® (0.5-1 lb per 100 lb of body weight daily)
Pleasure (light work) or Maintenance	PRIMEGLO® (0.2-0.4 lb per 100 lb of body weight daily)
Performance (training, moderate work, or intense work)	POWERGLO® (0.2-1 lb per 100 lb of body weight daily) SENIORGLO® (0.3-1 lb per 100 lb of body weight daily)
Geriatric	SENIORGLO (0.3-1 lb per 100 lb of body weight daily)
Stallions	PRIMEGLO (0.2-0.4 lb per 100 lb of body weight daily) POWERGLO (0.2-1 lb per 100 lb of body weight daily) SENIORGLO (0.3-1 lb per 100 lb of body weight daily)
Broodmares (first and second trimesters, late lactation, or dry)	PRIMEGLO (0.2-0.4 lb per 100 lb of body weight daily) SENIORGLO (0.3-1 lb per 100 lb of body weight daily)
Broodmares (last trimester or early lactation)	JUNIORGLO (5-8 lb daily) POWERGLO (0.2-1 lb per 100 lb of body weight daily) SENIORGLO (0.3-1 lb per 100 lb of body weight daily)
Draft Horses	PRIMEGLO (0.2-0.4 lb per 100 lb of body weight daily) SENIORGLO (0.3-1 lb per 100 lb of body weight daily)
Ponies or Miniatures	PRIMEGLO (0.2-0.4 lb per 100 lb of body weight daily)

Refer to label directions for complete feeding instructions.

Fortified Feeds (Patriot®)

Creating a Forage First® Program for your horse is easy . . .

1. Nutrient needs are determined by life stage of horse and class of horse/level of activity.
2. As much of the horse's nutrient needs as possible should be provided by forages (pasture, hay and/or forage products like hay cubes or forage pellets).
3. Provide vitamin-mineral products because forages do not contain all the minerals and vitamins needed by a horse. These can be provided by one of the below Patriot products or with GROSTRONG® Vitamin-Mineral products.
4. Good-quality forages and a vitamin-mineral supplement may provide all the nutrients and calories a non-working, mature horse needs. For all other classes and activities, additional nutrient needs can be met with one of the Patriot products and/or Premium Hi-Fat Supplements (HEALTHY GLO® or MOORGLO®).
5. StaySTRONG™ Metabolic Mineral Pellets and StaySTRONG 33 Ration Balancer also provide excellent ways to balance a forage diet by providing vitamins, minerals and essential amino acids/protein sources along with other beneficial nutrients in a 1-2 lb daily feeding rate.
