

Rumen Health Enhancements

Refer to product labels for complete mixing and feeding directions.

ADM Animal Nutrition® offers a diverse portfolio of targeted solutions-based nutritional additives and animal health products to optimize animal health, performance and subsequent dairy operation profitability. ADM Animal Nutrition's rumen health enhancement portfolio offers product selections to help ensure proper rumen function which is essential for maximum production and health. A number of products are available to help optimize rumen pH, VFA production and enhance microbial protein synthesis. Various buffering options including specialized products that elevate ration DCAD (dietary cation-anion difference) and have a beneficial impact on rumen pH

Buffering options Various buffering options including specialized products that elevate ration DCAD (dietary cation-anion difference) and have a beneficial impact on rumen pH

RumeNext^{®}-Dairy

RumeNext^{®}-Dairy enhances rumen function by favorably altering rumen fermentation and rumen-protein digestion for favorable production responses

Ultra 1

Ultra 1 is a proprietary blend of direct-fed microbials, Proponse^{®} yeast and CitriStim^{®} (ADM proprietary whole-cell yeast) to help stabilize rumen pH, enhance fiber digestion and may favorably impact the gut microbial population and body defense mechanisms

Proponse^{®} yeast
