

AMPT™ Minerals

Refer to product labels for complete mixing and feeding directions.

AMPT . . . it's Advanced Mineral Performance Technology
Mineral nutrition impacts beef cattle's growth, reproduction and health. Advanced research and new technologies have led to the development of greatly improved mineral sources. Never before has a mineral company combined these technologies into one package. Until now. AMPT beef minerals are targeted mineral supplements that provide only the minerals and vitamins in the optimum amounts and ratios that benefit cattle, and now features 100% chelated copper, zinc, and manganese. AMPT's distinctive mineral sources were selected based on achieving precision, balance and the ability to deliver the best mineral nutrition in a 4 oz per head per day consumption rate.
AMPT's Minerals precisely target optimum nutrient levels, complementing the diet, to deliver the best performance—nothing more, nothing less.
AMPT is formulated to be the best mineral nutrition. Why?AMPT doesn't duplicate what's already supplied in forageAMPT only supplies what cattle need to optimize performanceAMPT includes highly bioavailable mineral sourcesThose mineral sources don't interact with other biological substancesFeaturing 100% chelated, copper, zinc, and manganeseAMPT provides critical minerals that bypass the rumenAMPT supplies the needed minerals in the right amounts and ratiosAMPT supplies vitamins to ensure needs are met for proper function of metabolic, reproductive and immune systemsAMPT delivers a positive charge to beef mineral nutrition. Rumen bypass copper, zinc and manganeseRumen soluble cobaltHighly palatable magnesiumNo added potassiumAMPT incorporates weatherization process designed to eliminate mineral losses due to environmental conditions while enhancing mineral uniformity, yielding a product that withstands rain and wind while ensuring cattle get what they need when they need it, rain or shine, in every bite.

AMPT-A

AMPT-A products are the basic entry level AMPT products and are the AMPT mineral of choice when cattle are grazing wheat pasture or other higher quality forages that meet a substantial portion of nutrient requirements. AMPT-A Charged is an even higher fortified product option specifically targeting brood cows on average-quality forage and/or fescue. Additional options include pellet and meal forms for use when feeding co-products diets; an AMPT option with ADM's CitriStim^{®}; plus pressed block and cooked tub forms.

AMPT-M

AMPT-M products are charged with a higher level of magnesium for protection against grass tetany or other situations that require additional magnesium

AMPT-P

AMPT-P products are fed when taking cattle to the next performance level. AMPT-P supplies extra fortification along with the inclusion of several other production-benefiting nutrients like boosted phosphorus content, ADM's CitriStim^{®}, natural-source vitamin E and selenium yeast. It is an ideal mineral product to use before/after calving, during the breeding season or during any stressful situation.

AMPT-T

AMPT-T products are solid, versatile products when you only want to use one mineral year-round. AMPT-T is the preferred product to optimize economics and performance for a majority of the grazing season. Additional nutrient fortification includes natural-source vitamin E and a botanical extract which may enhance stress resistance and rumen function. A low salt formula, a co-product balancer formula, and the highly popular Endo-Fighter[®] options are available in AMPT-T. Endo-Fighter, an ADM exclusive, is a patented combination of components shown to favorably support production and well-being of cattle consuming endophyte-infected fescue forage
