ADM Robot Pellets

“We switched to ADM Robot Pellets and PMR grain in mid-November 2016. We saw almost an immediate response in the cows’ desire to visit the robots. We had tried three different feed companies since installing our robots. This is the first time we have felt really positive about cow visits. Over the past few months our cows have gained body condition and are showing better heats. We’ve gained about 8 lb of milk/cow/day. After we started seeing positive results on the milking herd, we started switching over to ADM products for the young stock. We are seeing much the same results on our calves and heifers. We have been pleased with all aspects of customer care, ease of ordering, feed sampling, ration balancing, etc.”
