Learn how PRO-DY can help your bottom line.

Stop riding the rollercoaster of protein variability and supply.

Protein variability making you queasy?

PRO-DY™

Not anymore.

PRO™-DY

Increase ROI

Decrease feed costs while maintaining nursery pig performance.

- **Excellent amino acid profile**

Allows PRO™-DY to be used in place of some higher priced protein sources

Limit Variability

Protein sources with variability in nutritional profile or supply hurt performance.

- ADM utilizes quality processes to control the entire production from fermentation to final product

Rest Assured

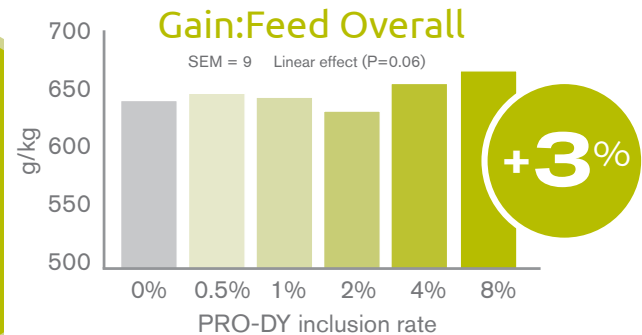

An ingredient option that you can count on.

- Not animal sourced; no known anti-nutritional factors; and more sustainable than fish meal and other protein ingredients with limited resource

Nursery Pig Rations

Stage/Phase	Estimated Body Weight	Suggested Inclusion Rate
Stage 1/Pre-Starter	8-15 lb	3-8%
Stage 2	15-25 lb	3-5%
Stage 3	25-50 lb	1-2%

Maintain performance while decreasing feed costs
