| Grain | 1600 | 1470 | 1550 | 1515 |
| Total | 2000 | 2000 | 2000 | 2000 |

Gestating Sows and Gilts: Feed each sow or gilt 4.5 lb of Gestation Ration per day or according to body condition. During the last two to four weeks of gestation, switch to a lactation ration and increase feeding rate to approximately 5.5 to 6.5 lb per head per day, depending on body condition.

Lactating Sows and Gilts: For best results, offer feed at least two times a day. Aggressively increase the amount fed per day so that lactating sows and gilts are on full feed as soon as possible. Feed 5 to 7 lb per head per day from weaning to rebreeding.

Adult Boars: Feed 4.5 lb per day of the Boar Ration during the inactive mating period and 5.5 lb per day during the active mating period, adjust feeding rate to maintain body condition.

Replacement Gilts: Feed 4.5 lb per day of the Replacement Gilt Ration upon arrival or starting at approximately 5 months of age. Two weeks before breeding, increase the amount fed per day to 6.5 lb. After breeding, feed 4.5 lb per head per day or according to body condition.
