

Gro Fast®

Dairy Beef Program

Proven nutrition from birth to market to deliver prime beef

Gro Fast, ADM's Dairy Beef Program, is the gold standard in the industry with a proven track record of optimizing desirable carcass traits in dairy beef and beef-on-dairy animals. Specifically formulated to meet their unique needs, Gro Fast provides efficient average daily gains and feed conversion for cost-effective growth. Research-backed and farm-proven, Gro Fast provides the nutrition producers trust from birth to market to deliver prime beef.

The Gro Fast Difference

Maximum dairy beef performance — Tailored to make the most of dairy beef's genetic potential to deposit a large amount of lean tissue efficiently and quickly.

Promotes high-yielding carcasses — Helps promote proper protein and fat deposition to produce high grade and yield carcasses.

Program Flexibility — Multiple Gro Fast options to complement specific feeding programs.

Formulated to promote feed efficiency — Gro Fast provides the protein, energy, bioavailable mineral and vitamin needs to promote feed efficiency.

Features & Benefits

All-natural protein (Gro Fast 32, 36) — High-quality, all-natural proteins maximize protein digestibility and provide the amino acids required to optimize growth and performance.

Non-Protein Nitrogen Option (Gro Fast 38/13) — Combination of natural protein and non-protein nitrogen (NPN) option available for animals >400 lb to provide efficient, economical performance.

CitriStim® — Unique, whole-cell yeast (*Pichia guilliermondii*) that may help strengthen animal defenses against health challenges by supporting and optimizing gut function, gut integrity, and body defense responses.

Fortified — Provides macro and trace minerals and vitamins for proper growth and immune function.

Hydroxy Cu, Zn, and Mn — Higher bioavailability for improved absorption and utilization.

The Pre-Weaned Calf Advantage

Superior lifetime performance begins with the pre-weaned animal and the Nurstrate calf milk replacer program. Nurstrate products are available in a variety of protein, fat and medication options and fueled by ADM's SI-Inside; a specific, advanced blend of carbohydrates, prebiotic starch, postbiotic whole-cell yeast, natural-source vitamin E, complexed (organic) trace minerals, and natural botanicals. This unique, proprietary technology delivers benefits to calves in performance and health.

Beneficial components of SI Inside may help the animal strengthen its defense against health challenges by supporting and optimizing gut function, gut integrity, and body defense responses. Research has shown calves fed milk replacer containing SI Inside responded with better growth response and a feed efficiency advantage over controls.

The Weaning to 400 lb Advantage

From weaning to 400 lb the Gro Fast Program utilizes specially-formulated concentrate options to be mixed with grain and forage to boost early calf performance.

Gro Fast Concentrates are available in 32% and 36% all-natural protein options. These products provide flexible ionophore, insect control and medication (some requiring a VFD) options to fit specific producer needs.

The 400 lb to Finish Advantage

Gro Fast Concentrates provide the precise protein, vitamin and highly bioavailable mineral balance to optimize efficient growth, average daily gain and feed efficiency in the 400 lb - finish animal. Gro Fast 38/13 provides a balance of natural and non-protein nitrogen sources of protein for cost effective performance.
